

Free Solar Installation Site Assessment Checklist

A field-ready checklist for solar installers — assess the site correctly the first time and set accurate customer expectations.

Roof & Structural Assessment

- ☐ Confirm roof age and remaining lifespan
- ☐ Check roof pitch, orientation, and shading obstructions
- ☐ Inspect structural integrity for panel load capacity
- ☐ Note roof material (shingle, tile, metal) for mounting method

Electrical System

- ☐ Inspect main panel capacity and available breaker space
- ☐ Check service entrance size (100A, 200A, etc.)
- ☐ Confirm grounding and bonding meet code

Site & Shading Analysis

- ☐ Run shading analysis across all seasons
- ☐ Identify nearby trees, chimneys, or structures causing shade
- ☐ Measure usable roof area for panel layout

System Design Considerations

- ☐ Review 12 months of utility bills for usage patterns
- ☐ Confirm homeowner's energy offset goals
- ☐ Discuss battery storage options if applicable

Documentation & Close-Out

- ☐ Photos taken of roof, panel, and site conditions
- ☐ Written proposal with system size and estimated production
- ☐ Permitting and utility interconnection process explained
- ☐ Financing or incentive options discussed
